

# 1 Parameter Fits

## 1.1 Alpha

### 1.1.1 Linear Fit

$$y = mx + c$$

$$m = -0.0146437 \pm 0.012 \text{ (81.92\%)}$$

$$c = -1.66423 \pm 0.06781 \text{ (4.074\%)}$$

Mean Coord: 5.3964, -1.7432

### 1.1.2 Linear Fit Pivot

$$y = mx$$

$$m = -0.0146437 \pm 0.01152 \text{ (78.7\%)}$$

Mean Coord: 5.3964, -1.7432

### 1.1.3 Logarithmic Fit

Not using this fit

## 1.2 $\phi^*$

### 1.2.1 Exponential Fit

$$\phi^* = m \times e^{cx} + d$$

m = 0.0521538 +/- 0.09597 (184%)  
c = 1.48655 +/- 0.7866 (52.92%)  
d = 0.00105869 +/- 0.0001342 (12.68%)

Mean Coord: 5.3577, -0.0013

### 1.2.2 Linear Fit

$$y = mx + c$$

m = -0.00018463 +/- 7.933e-05 (42.97%)  
c = 0.00225921 +/- 0.0004469 (19.78%)

Mean Coord: 5.3577, -0.0013

### 1.2.3 Linear Fit (With Cutoff)

$$y = mx + c$$

m = -3.57873e-05 +/- 8.15e-05 (227.7%)  
c = 0.00130465 +/- 0.0004902 (37.57%)

Mean Coord: 5.8455, -0.0011

This didn't really help.

### 1.3 $M^*$

#### 1.3.1 Logarithmic Fit

Something

#### 1.3.2 Linear Fit

$$y = mx + c$$

$$m = 0.22116 \pm 0.03555 \text{ (16.07\%)}$$

$$c = -21.642 \pm 0.201 \text{ (0.9286\%)}$$

Mean Coord: 5.3964, -20.4486

#### 1.3.3 Linear Fit Pivot

$$y = mx$$

$$m = 0.22116 \pm 0.03416 \text{ (15.44\%)}$$

Mean Coord: 5.3964, -20.4486
